Applicant argued on page 2, last paragraph of the Remarks that the secondary reference Connor teaches away from the claimed invention and from the primary reference Treadaway, examiner respectfully disagrees. First, Connor does not teach when the fullness threshold of the receiver FIFO is exceeded, the inter-packet gap of packets transmitted from a receiver is increased in col. 1, lines 58-67. In fact, Connor teaches reducing the transmit rate by reducing the inter-packet gap in col. 1, lines 58-67. Second, applicant appeared to ignore the sections indicated by the examiner in the previous Office action (col. 3, lines 9-12, 19-20 and col. 3, lines 49-51) that Connor teaches a method of dynamically metering packet flow in a packet switched network, which employs decreasing inter-frame spacing IFS or inter-packet gap will increase data rate and increasing inter-frame spacing IFS will decrease data rate. In light of the foregoing reasons, Claims 1-20 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Treadaway et al. (USP 7,002,941) in view of Connor (USP 7,061,866).
